Gout Guide

Lifelong Transformation, One Healthy Habit at a Time®
Welcome to OPTAVIA!

At OPTAVIA, we believe you can live the best life possible and we know that requires a healthy you. We help you achieve lifelong transformation by incorporating healthy habits into everything you do. These habits get your mind and body working together, to work for you.

If you suffer with gout, achieving a healthy weight can help. Excess weight puts more stress on your joints and can increase your risk of hyperuricemia. OPTAVIA Fuelings are completely safe to use even if you have a history of gout; however, we do recommend certain modifications to your meal plan.

Those with gout should lose weight gradually and steadily, using a meal plan that is slightly more liberal in calories and carbohydrates, yet more restricted in protein than the Optimal Weight 5 & 1 Plan®, to lessen the risk of increased uric acid levels. OPTAVIA’s program for gout does not induce a fat-burning state, which can increase uric acid levels in the blood. Its higher calorie level promotes a more gradual weight loss than the regular Optimal Weight 5 & 1 Plan, and it encourages food choices with only low or moderate amounts of purines.
Before You Begin

We recommend that you contact your healthcare provider before starting and throughout your OPTAVIA journey, especially if you are taking medications (e.g., diabetes medications, high blood pressure medications, Coumadin (warfarin), lithium, thyroid medications etc.).

MEDICAL DISCLAIMER:

The Company ("We") recommends that you consult your healthcare provider prior to starting any weight loss program, and during the course of your weight loss program. Do NOT use any OPTAVIA® plan if you are pregnant or under the age of 13.

Before starting a weight loss program, talk with your healthcare provider about the program, and about any medications or dietary supplements you are using, including especially Coumadin (warfarin), lithium, diuretics, or medications for diabetes, high blood pressure or thyroid conditions. Do not participate in any OPTAVIA Program until you are cleared by your healthcare provider if you have or have had a serious illness (e.g. cardiovascular disease including heart attack, diabetes, cancer, thyroid disease, liver or kidney disease, eating disorders such as anorexia or bulimia), or any other condition requiring medical care or that may be affected by weight loss.

The OPTAVIA for Teens plan is the only OPTAVIA Program appropriate for teens (13 to 17 years of age). The Optimal Weight 5 & 1 Plan® is NOT appropriate for teens, sedentary older adults (65 years and older), nursing mothers, people with gout, some people with diabetes, and those who exercise more than 45 minutes per day - if you fall into one of these categories, please consult your healthcare provider and refer to www.OPTAVIA.com and talk with your independent OPTAVIA Coach about other OPTAVIA plans that may be appropriate. For special medical or dietary needs, including food allergies, refer to our program information online, consult your healthcare provider and talk to your OPTAVIA Coach. Do not consume an OPTAVIA product if you are allergic to any of that product’s ingredients which are listed on the product packaging and on the OPTAVIA website.

We recommend drinking 64 ounces of water each day. Consult with your healthcare provider prior to changing the amount of water you drink as it can affect certain health conditions and medications.

NOTE: Rapid weight loss may cause gallstones or gallbladder disease or temporary hair thinning in some people. While adjusting to the intake of a lower calorie level and dietary changes, some people may experience dizziness, lightheadedness, headache, fatigue, or gastrointestinal disturbances (such as abdominal pain, bloating, gas, constipation, diarrhea, or nausea). Consult your healthcare provider for further guidance on these or any other health concerns. Seek immediate medical attention if you experience muscle cramps, tingling, numbness, confusion, or rapid/irregular heartbeat as these may be a sign of a more serious health condition.

For avoidance of doubt, the OPTAVIA Programs and products are not labelled, advertised or promoted for any specific medicinal purpose, i.e. treatment or prevention, implied or otherwise, of any disease or disorder, including its related conditions.

The OPTAVIA programs, products, and any of its materials and/or information do not in any way constitute medical advice or substitute for medical treatment. As individuals may have different responses to dietary products or changes in diet, consult with your healthcare provider regarding any medical concerns.

For further information regarding this Medical Disclaimer, call Nutrition Support at 1.888 OPTAVIA or email at nutritionsupport@OPTAVIA.com.
Gout Plan

The OPTAVIA for Gout Plan incorporates a balance of low purine foods, moderate protein, and two OPTAVIA Fuelings to provide approximately 1,200 calories per day. On this plan, you’ll eat six times daily, once every two to three hours. Use the Food Group Chart and sample meal plan on page 6 to help you plan your meals.

We recommend the following as part of the OPTAVIA for Gout Plan:

- Limit animal protein in your diet. Choose no more than six ounces of low- or moderate-purine choices of lean meat, poultry, or fish per day.
- Incorporate two servings of low-fat or fat-free dairy products daily. Dairy products may help to prevent or decrease the risk of gout.
- Aim for about 1,200 calories per day to allow for gradual weight loss and to decrease the potential of developing elevated uric acid levels.
- Choose foods that are low and/or moderate in purines, and avoid moderate-purine choices during a gout flare-up.
- Avoid alcohol during the weight-loss phase and during flare-ups.
- Drink 64 oz. of water each day as it can help remove uric acid from the body.*
- Limit higher-purine vegetables such as asparagus, cauliflower, mushrooms, peas, and spinach, and avoid them completely during a flare-up.

Remember, these are general recommendations – every individual is different, so it is important to discuss any weight-loss program with your healthcare provider to determine if it’s right for you.

*We recommend drinking 64 ounces of water each day. Contact your healthcare provider prior to changing the amount of water you drink as it can affect levels of certain medications.
increase your health, confidence, and vitality
