

Vegetable Conversion Chart

While some Clients prefer to use measuring cups to measure their vegetables for the Lean & Green™ Meal, others prefer to use a food scale to get an exact measure of weight. If you choose to weigh your vegetables, this chart will help you convert a vegetable's volume (in cups) to its weight on a food scale (in grams and ounces).

Here's how it works:

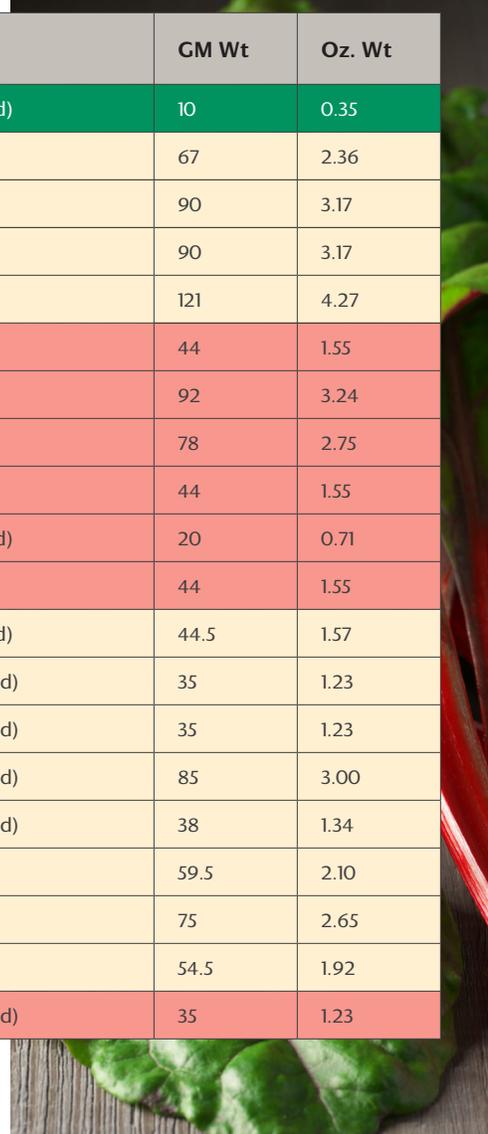

1. Pick which vegetable(s) you would like to have for your Lean & Green Meal on the "Green Options" list in your program guide.
2. Find the vegetable in the list below for the gram and ounce equivalent to one serving of that vegetable (½ cup unless otherwise specified).
3. You need 3 servings of vegetables for your Lean & Green Meal. If you plan to only have one type of vegetable, multiply the gram and ounce amount by 3 for a total of 3 servings. If you plan to have a combination of vegetables, you can adjust the amounts accordingly.

As you use this chart, keep in mind that the raw weight listed is not representing how much raw vegetable will yield a ½ cup cooked. The raw weight represents how much raw vegetable equates to a ½ cup portion, and the cooked weight represents how much cooked vegetable equates to a ½ cup portion. The weight measurements listed on the chart are derived from the [USDA's FoodData](#).

Some Clients prefer to weigh their vegetables in the form they are going to eat it in, while others find it easier to weigh prior to cooking. It is fine to use either approach; the nutritional differences between the two will be negligible. Both methods will result in a healthy portion of vegetables that complies with the nutritional parameters for the Green portion of your Lean & Green Meal.

● **Lowest Carbohydrate**
